How to use your Starchart

Hold the starchart up in front of you when you're facing the appropriate direction and look at the sky!

Looking North

The Plough is the most easily recognised group of stars in the northern sky. It is always above the horizon, it looks a bit like a saucepan, and the two stars furthest from the ‘handle’ end point towards the North Star, so you can always find north.

On the other side of Polaris is the W-shape of Cassiopeia. The stars in the northern sky are the same all year round, so you will always be able to find them on a clear night.

An easy guide to help you navigate your way around the night sky in the Northumberland International Dark Sky Park.

How to use your Starchart

Hold the starchart up in front of you when you’re facing the appropriate direction and look at the sky!

Looking North

The Plough is the most easily recognised group of stars in the northern sky. It is always above the horizon, it looks a bit like a saucepan, and the two stars furthest from the ‘handle’ end point towards the North Star, so you can always find north.

On the other side of Polaris is the W-shape of Cassiopeia. The stars in the northern sky are the same all year round, so you will always be able to find them on a clear night.
Looking South

These stars change throughout the year, but you should see
variously, Orion the hunter, the Swan (and if you’re very lucky, our
galaxy, the Milky Way down which it flies), the Square of Pegasus,
and if you follow the curve of the handle of the Plough, Arcturus.

Where can you go to see the stars?
